# CARE AND MAINTENANCE

## NX SUPERMATT

The **NX Supermatt** range is covered with a protective film to prevent the surface with scratches during the production, transport and assembling of furniture parts. This protective film should only be removed after all installation works has been completed. After the protective film is removed, there will be residues of glue from the protective film, which will give the surface a haze appearance. Therefore the surface should only be to cleaned and polish with a mild soap solution (max 1% soap), using a soft cloth. Other cleaning products are NOT recommended.

Stains should be removed with warm, diluted soap solution if necessary in combination with a soft sponge. Dilutions of any commercially available cleaners for plastic surfaces consisting of ionic or non-ionic detergents are approved. After cleaning, the surface must be rinsed with clear water and dried with a soft cloth.

### **WARNING:**

It is advised to avoid using these products below:

- Abrasive cleaners
- Oxidative substances (chlorates, perborates or other bleaching agents)
- Strong Alkalines (conc. Ammonia, sodium hydroxide solutions)
- “Care” substances like waxes or polymer dispersions
- Steam cleaning tools
- Concentrated alcohols (methylated spirit, isopropanol)

If stains cannot be removed with diluted soap mentioned earlier, the alternative solution would be to use diluted ethanol or cleaners containing alcohol (e.g. window cleaner).
