CARE AND MAINTENANCE

TRP

TRP (Thermoplastic Reinforced Plywood) films are single or multilayered plastic films which are 3-D thermo formable. Using the latest technology and manufacturing has led to the production of superb designs and high quality solid colours, using the latest pigmentation, printing and embossing techniques. The products have excellent mechanical resistance, light fastness and stain resistance.

CLEANING RECOMMENDATIONS:

The surface of TRP should be used with a non-abrasive cleaner or mild cleaning solutions. It is recommended to remove stains with warm, diluted soap solution if necessary in combination with a sponge. Dilutions of all sorts of commercially available cleaners for plastic surfaces consisting of ionic or non-ionic detergents are usable. After cleaning, the surface has to be rinsed with clear water and dried with a soft cloth.

To prevent the surface from damaging, it is advised that the use of abrasive cleaners, solvents, polishes, waxes or steam cleaning tools should be avoided at all times.
